What's known about NPS

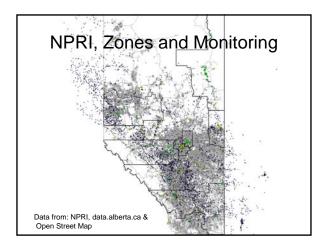

Matthew Dance M.A.

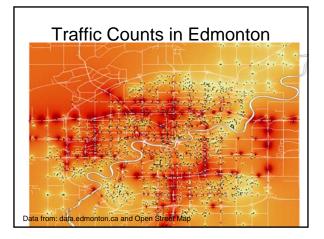

Overview

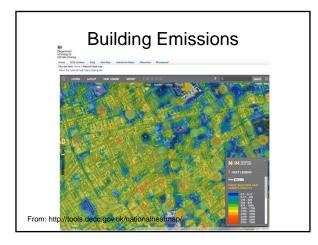

- 1. Context
 - Global
 - Alberta
- 2. Alberta NPS Emissions
- 3. Gaps
- 4. NPS Defined
- 5. Questions

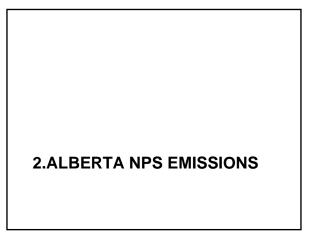

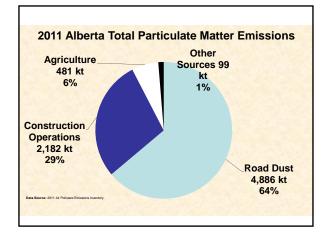

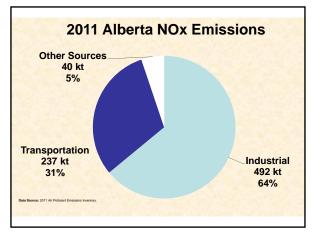

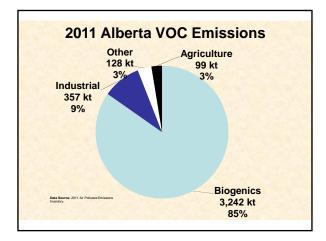

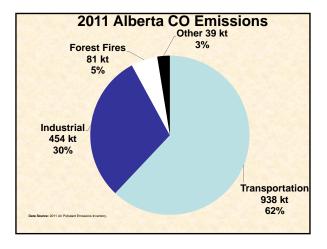

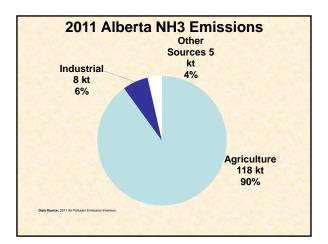

3.GAPS	

4

"Stationary monitoring indicated air quality improvement from 2005 to 2010, whereas mobile monitoring indicated areas that experience both improvement and decline..."

4.NPS DEFINED

Definition

Non-point sources are **aggregated** sources of air emissions, as opposed to individual identifiable sources of emissions (point sources). This aggregation is done because the emission sources are either too small and numerous, too geographically dispersed, or too geographically large to be estimated or represented by a single point.

Examples on NPS

Residential Fuel Combustion (e.g. home heating); Commercial Fuel Combustion (e.g. space and water heating); Residential Fuel Wood Combustion (e.g. fire places, wood burning stoves); Transportation (e.g. on-road and offroad vehicles, air, rail, etc). Incineration (cremation, industrial, commercial); Cigarette Smoking; Due Clonagies;

Dry Cleaning; General Solvent Use:

Meat Cooking;

Refined Petroleum Products Retail (gas stations); Printing; Structural Fires; Surface Coatings; Agriculture (animals, tilling & wind erosion, fertilizer application); Construction Operations; Road Dust (paved and unpaved roads); Waste; Mine Tailings; Prescribed Burning; Biogenics (soils and plants); Forest Fires; etc. Matthew Dance matt@matthewdance.ca @mattdance
